ABDULLAH MASUD

TECHNICAL OPERATIONS, QUALITY AND PROJECT DELIVERY

Woodbridge, VA 22192 - 571-866-3024 - amasud.tech@gmail.com - Portfolio: https://portfolio.penthouse.blog - GitHub: https://github.com/AIMDaAlien

PROFESSIONAL SUMMARY

Run operations, quality, hardware, and project work across inventory control, AI evaluation, software testing, small-business fulfillment, and self-directed systems. Track work against procedures, investigate problems, write clear notes, and carry technical tasks through resolution. Build practical projects and publish useful work for recruiters to review.

CORE COMPETENCIES

Inventory and receiving, AI evaluation, software testing, workflow coordination, quality checks, hardware diagnostics, technical documentation, fulfillment, vendor follow-up, project delivery, process improvement

PROFESSIONAL EXPERIENCE

Assistant Store Manager

NTB and Mavis Tires, Woodbridge, VA, March 2024 to May 2025

- Received parts shipments, verified purchase orders, tracked hundreds of tire and parts SKUs, completed physical counts, and followed up with vendors.
- Used POS, shop-management, work-order, and ticketing workflows to keep active work and status records current.
- Adjusted scheduling and staging workflow to reduce service turnaround by 15% and reduce floor-space bottlenecks.

AI Evaluation Specialist

Contract, Prolific, Mindrift, Kili Technology, Handshake AI, Remote, January 2023 to Present

- Evaluate text, image, audio, and video outputs against instructions and rubrics. Perform preference ranking, factuality review, instruction-following review, edge-case identification, rationale writing, and escalation.

Owner and Fulfillment Operator

Aim's 3D Print Shoppe, Woodbridge, VA, January 2024 to Present

- Track filament and consumable inventory, process custom orders through production and quality checks, package finished work, complete customer delivery, and manage the storefront at https://aim3dprints.com.

Software Tester

Crowdsource and uTest, Remote, 2024 to Present

- Perform functional, exploratory, smoke, and regression testing. Report reproducible defects and retest fixes across browsers, devices, and operating systems.

SELECTED PROJECTS

The Penthouse

Privacy-Focused Social Application, December 2025 to Present

- Build and test a social application at https://penthouse.blog through staged planning, implementation, review, integration testing, documentation, and human approval for risky changes.

Hardware and Infrastructure Lab

Self-Directed, 2023 to Present

- Build, upgrade, diagnose, and maintain systems supporting Linux, Docker, Unraid, ZFS storage, backups, monitoring, DNS, and self-hosted services. Recovered a Docker storage migration by rebuilding 13 containers and restoring service configuration. Publish selected hardware writeups at https://teardown.cafe.

Penthouse Hotswap Failover Node

Self-Directed, 2026 to Present

- Designed and fault-tested a read-only failover architecture using PostgreSQL synchronous replication, HAProxy reader routing, and media mirroring across a primary Unraid server and a mini-PC standby node, with a single-writer model preventing split-brain writes.

Local LLM Inference Server (BigRig)

Self-Directed, 2026 to Present

- Built a multi-GPU inference server (Ryzen 9 7950X, 64GB DDR5, RX 9060 XT 16GB, dual RTX 3060) serving language models over an OpenAI-compatible API to LAN clients, with benchmark-driven model and quantization selection.

COMMUNITY EXPERIENCE

Volunteer Discord Moderator

Online Communities, 2020 to 2021

- Supported moderation for two primarily anime community servers over roughly two years. Continue to maintain a personal community server.
